Designing With Purpose

BuiltTrue

Products that solve real problems.
Nothing unnecessary.

The Story

I've always believed that if something is worth doing, it's worth doing right.

Throughout my career as a designer, I've taken pride in the precision and quality of my work. I've never been comfortable cutting corners or settling for something I knew could be better.

That mindset eventually cost me my job. I stood up for the standards I believed in, even when it would have been easier to stay quiet and do things differently.

Rather than compromise those principles, I decided to build something of my own.

That's how Built True began. A company built around a simple belief: quality shouldn't be something you compromise on.

I'm starting small, designing and manufacturing products myself, but the standard remains the same. If I'm going to put my name on something, I'm going to do everything I can to make sure it's done right.

OUR FIRST PRODUCT

Meet TrueRack.

A precision-engineered foldable pool rack that makes racking easier, faster, and more consistent.

Tested, refined, and built to perform.

THE ROAD AHEAD

We're Just Getting Started.

TrueRack is the beginning. Built True is about continuing to design products that solve everyday problems through precision and purposeful engineering.

Same approach. New ideas. More to come.
